NEWS RELEASE

Dynamic Systems Releases Integrated Software for Contractors.

October 19, 2009/Redmond, Washington/ Dynamic Systems, Inc., a Redmond, Washington software developer specializing in barcode data collection, has announced the release of a low cost Software Suite for Contractors.

Integrated System DSI has announced the immediate release of the CheckMate Contractors' Suite, which integrates four applications (Toolroom Tool Tracking, Stockroom Inventory Control, Job Costing with Time and Attendance, and Document Tracking). This new release allows the applications to share the inventory database and employee identification codes, thus making it possible to cost jobs and track important tools and documents without time consuming data entry.

The CheckMate Contractors Suite brings the power of much more expensive ERP systems at a much lower price. Bar codes are printed on work orders or drawings, badges and labels for tools and inventory. Bar code scanners (either corded to a PC or portable) scan the bar codes during transactions to record the movement or use of the job, document, tool or other item. This information is transmitted to the job foreman, accounting or purchasing to provide the location of important tools, employee attendance information, parts reorder reports and much more.

Additional Features New features have been added to the CheckMate software packages as well, including Signature Capture on a portable terminal provides proof of delivery of tools or inventory items and the ability to easily export/import the data using Excel.

Rugged Barcode Labels Dynamic Systems has over 25 years' experience with industrial barcode applications and has researched label materials and adhesives to find the ideal combination for use in harsh environments. The labels are designed to withstand heat, cold and various solvents without degrading.

"Our customers see a typical payback for the software within 3-4 months," states Alison Falco, President of Dynamic Systems.
