NEWS RELEASE

Dynamic Systems Releases Basic Tool Manager Software for the Smaller Contractor.

November 14, 2008/Redmond, Washington/ Dynamic Systems, Inc., a Redmond, Washington software developer specializing in data collection applications for the construction and manufacturing industries has announced the release of a low cost tool manager based on bar code technology.

About Dynamic Systems (DSI)

In business since 1981, DSI provides bar code systems to the construction and manufacturing industries, including a tool management system, a maintenance scheduler, inventory control, time and attendance and job costing. Bar code data collection has been proven to be the most accurate and efficient method of tracking or counting items.

Release of Basic Tool Manager

DSI has announced the immediate release of "Basic Tool Manager", targeted at contractors who want to reduce the loss of tools and save time tracking down tools for the jobs but cannot afford the more complex systems available on the market today. "I'm impressed with the simplicity and adaptability of your tool management system. It's affordable for all contractors, even those with just a few employees," stated Bill Allen, Process Consultant to the construction industry.

Cost Justification

If it requires one minute to check a tool out or in, and the contractor's staff spends even 20 minutes a day searching for tools, the overhead savings is dramatic. "Loss and theft of tools is a major overhead cost for the construction industry. Our customers see a typical payback for the Tool Manager within 3-4 months," states Alison Falco, President of Dynamic Systems.
