NEWS RELEASE

**Dynamic Systems Releases WIP (Work In Process) Lite Software for Manufacturers.**

**May 10, 2009/Redmond, Washington/** Dynamic Systems, Inc., a Redmond, Washington software developer, specializing in data collection applications for the manufacturing industry, has announced the release of a low cost Work In Process software program based on bar code technology.

**Release of Work In Process**

DSI has announced the immediate release of WIP Lite, targeted for small to mid-sized manufacturers who want to know Who is assigned the job, Where it is in the plant now, and How long it's been in that location, but don't want to pay for the more complex integrated Work In Process systems sold with the typical manufacturing ERP software.

Using the CheckMate WIP Lite software, the work-order can be tracked to a "location" (department, task or employee). The work-order is printed with a barcode identification number and each "location" is assigned a barcoded badge. The work-order number and the badge are scanned using a barcode reader (either a scanner "corded" to a PC or a portable barcode terminal) as the job moves into a "location". The work-order (job) remains assigned to that "location" until it is scanned again into another "location". Multiple jobs may be assigned to the "location" and timeframes may be set for each task and reported when overdue. This system is simple to set-up, easy to use, and gives production managers the ability to view the location of any job that is in the manufacturing process at any time.

**Cost Justification**

Advantages to a WIP Program includes: reduction of late jobs, ability to identify bottlenecks, improvement in productivity, reduction of employees frustrations and increased customer service. "Our customers see a typical payback for the WIP program within 3-4 months," states Alison Falco, President of Dynamic Systems.
